User Story #1	Attaching directions to events
User Story Description	As an event host, I want to provide directions to events so that potential attendees know where the events are.
Additional Detail	The user can use the direction information provided to determine which events they want to attend or if it is convenient to attend multiple events that are in proximity.
Acceptance Criteria	- Given that I am a logged-in event host - And I am viewing the event listing interface - When I create an event listing - I want to input a Google Maps link, which will appear to the user as a button
Priority	Low
Checklist	Independent, Negotiable, Valuable, Estimable, Sized appropriately, Testable
Associated Task	- Create a field for event hosts to input a Google Maps link - Store the Google Maps link in the backend - Create a clickable element with the Google Maps link - Adjust the element as desired with CSS
Task Assignments	TBD

User Story #2	Attach images to events
User Story Description	As an event host, I want to provide an image of my event location so that users know what my event looks like
Additional Detail	Event hosts can choose whether to use an image of the building, classroom, food, etc.
Acceptance Criteria	- Given that I am a logged-in event host - And I am viewing the event listing interface - When I create an event listing - I want to upload an image of my event, which will appear to the users when they browse events
Priority	Low

Checklist	Independent, Negotiable, Valuable, Estimable, Sized appropriately, Testable
Associated Task	- Create a field for event hosts to upload an image - Store the image in the backend - Render the uploaded image in the event listing
Task Assignments	TBD

User Story #3	Attach a timeframe to an event
User Story Description	As an event host, I want to provide a timeframe for my events so that potential attendees know when to arrive
Additional Detail	Allows users to determine whether or not they can attend specific events due to time constraints
Acceptance Criteria	- Given that I am a logged-in event host - And I am viewing the event listing interface - When I create an event listing - I want to input a timeframe for my event, which will appear to users when browsing event listings
Priority	High
Checklist	Independent, Negotiable, Valuable, Estimable, Sized appropriately, Testable
Associated Task	- Create a field for the event host to input a timeframe - Store the timeframe in the backend - Display the timeframes in the event listings
Task Assignments	TBD

User Story #4	Create flairs for different dietary restrictions
User Story Description	As an event host, I want to be able to inform users about the available food's compatibility with different dietary restrictions so that they know which events to attend
Additional Detail	Users can determine which events they want to attend based on the

	availability of food that aligns with their dietary restrictions
Acceptance Criteria	- Given that I am a logged-in event host - And I am viewing the event listing interface - When I create an event listing - I want to select flairs that reflect my event's food's compatibility with dietary restrictions
Priority	High
Checklist	Independent, Negotiable, Valuable, Estimable, Sized appropriately, Testable
Associated Task	- Add fixed flair selection to the host input form - Store flairs in the backend - Display flairs in the event listings
Task Assignments	TBD

User Story #5	Creating recurring listings
User Story Description	As an event host, I want to be able to have my listing recur so that I do not have to manually recreate it.
Additional Detail	If an event is recurring, the host should be able to set it as a recurring event rather than recreating it each time.
Acceptance Criteria	- As a registered event host - When I am viewing the event listing interface - When I create a listing - I want to input the future days/times when my event listing will appear to users
Priority	Medium
Checklist	Independent, Negotiable, Valuable, Estimable, Sized appropriately, Testable
Associated Task	- Add a recurrence option to the host input form - Store recurrence in the backend - Create a boolean for recurrence and if true dynamically create listings based on date provided
Task Assignments	TBD

User Story #6	Attach social media to events
User Story Description	As an event host, I want my event's social media handle to be present on the listing so users can visit my page
Additional Detail	BU groups may want to advertise themselves
Acceptance Criteria	- As a registered event host - When I am viewing the user interface - When I create a listing - I want to input my social media handle that appears to the user as a button
Priority	Low
Checklist	Independent, Negotiable, Valuable, Estimable, Sized appropriately, Testable
Associated Task	- Create a field for the host to input social media link - Store the link in the backend - Create a clickable element with the social media link - Modify the element as desired with CSS
Task Assignments	TBD

User Story #7	Attach contact information to events
User Story Description	As an event host, I want to attach contact information to my events so that potential attendees can reach out with questions or concerns
Additional Detail	Allows the user to directly communicate with the host
Acceptance Criteria	- As an event host - When I am viewing the event listing interface - When I create a listing - I want to input my contact information that appears to the user in my listing
Priority	Low
Checklist	Independent, Negotiable, Valuable, Estimable, Sized appropriately,

	Testable
Associated Task	• Create a field for the host to input their email • Store the email in the backend • Display the email in the listing
Task Assignments	TBD

User Story #8	Out of stock mechanic
User Story Description	As an event host, I want to be able to update my listing when my event runs out of food so that users know when there is no more food available.
Additional Detail	Users will know which events have run out of stock and which events are still ongoing

Acceptance Criteria	• As an event host
	   ○ When I am viewing the event listing interface
	   ○ When I click on my listing
	   ○ I want to be able to update the listing so that it reflects that there is no more food available

Priority	High
Checklist	Independent, Negotiable, Valuable, Estimable, Sized appropriately, Testable
Associated Task	• Create a field for events that reflects "active" or "out of stock" • Allow the host to input either field in their event listing • Store the field in the backend • Display "active" or "out of stock" in listing
Task Assignments	TBD
